Tire Fitment Guide

This tire fitment guide is meant to provide direction in fitting larger than stock tires on your 4x4 vehicle. This guide is not, however, a guarantee that the stated tire size will fit the corresponding amount of lift. There are many factors that impact the ride height of an individual vehicle including optional equipment, aftermarket equipment, condition of suspension components, vehicle damage, cargo weight, etc. Furthermore, a manufacturer's advertised lift height vs. actual lift height may vary, and a tire's advertised diameter rarely matches the tire specifications once mounted on the vehicle. Therefore, use this guide as a starting point, but additional research with the lift manufacturer is highly recommended, and a trial fit of your wheel and tire package is the true test of what fits. Keep in mind that wheel backspacing/offset will be critical to tire clearance on many vehicles. Additionally, minor fender trimming may be necessary, and a small amount of tire rubbing on suspension components or the wheelwell at full steering lock may be assumed. If in doubt, opt for the next highest available suspension lift. Finally, on vehicles using body on frame construction, a 1" body lift can be utilized for extra clearance. Please note, however, that Overland Vehicle Outfitters discourages the use of body lift kits above 1" and our recommendation is for replacement polyurethane body lift kits vs. the hard puck style kits.

Model	Year	Tire Size (inches) Lift Required (inches)						
		29	30	31	32	33	34	35
Jeep								
CJ (Flatfender)	All	0	0	1	2.5	3.5	5	n/a
CJ	55-86	0	0	1	2.5	3.5	5	n/a
